Non-Residential civil construction

Industrial and Technological Facilities

The know-how accumulated over the years by the Elevo Group in the construction of technological centres and industrial facilities on national territory is already invaluable. These were complex projects, requiring the involvement of high-level technical means and capacity and that imposed an operational management of excellence. But it is also these projects that require us to attain technical and professional levels that are not easily replicated and that position the Elevo Group at a high competitive level.
